

Hour-16 SCAI proxy distribution

All stays remain in the denominator, including unclassified stays and those no longer in the ICU.

Stage A cannot be determined from the available data; it is not a zero-prevalence category.

B-E are minimum evidenced SCAI proxy stages. Unclassified stays may include stage A or higher stages.

Percentages use the full sample in each panel. Counts are ICU stays; the model samples overlap and are subsets of the full cohort.

Physiology: latest valid value in hours 12–16; treatment evidence at hour 16. ICU departure/discharge categories combined for display.
